

Non-Contact Marking

DS-20 Macro Mini Marker

**Robust, Reliable,
Non-Clogging,
Spray Marker**

- Larger Nozzle
- Robust Engineering
- Easy Maintenance

Low Pressure Atomizing Air Marker For Rugged Applications

Special features include: a large opening for clean and reliable flow of marking inks, robust engineering for applications in harsh environments and a recirculating system that keeps ink from settling and clogging. Constant movement keeps fluid moving so fresh ink is always available during operation. Maintenance is easier too.

DS-20 is available on all new Dell Marking Systems and for retrofit on existing systems. A unique replacement program is available on the DS-20 component itself. A DS-20 is kept in reserve for instant replacement. Dell Marking Systems will refurbish the used marker and return it so there is no down time waiting for replacement parts. A replacement marker is always available.

DS-20 is especially suited for harsh chemical environments and in field applications like pipe marking for leak detection or to ease assembly. Dell provides complete marking system design and build services and formulates workplace safe, low VOC pigmented and non-pigmented inks.

For additional information contact:

Ideal for quadrant marking on pipelines during leak detection and quality control operations.
