

Contact Marking

- Mounted in-line
- Disposable ink cartridges
- Precise amount of ink is released on each
- Reduces color coding costs
- Ink won't dry out during short downtimes
- No outside power source is required
- Quick color change

Production Spring Striper

A totally new concept in spring marking!

The new Production Spring Striper, designed exclusively for spring manufacturers is a clean, simple and effective method of applying a colored stripe to your springs.

Mounted in-line, the movement of the springs on your production line triggers the release of ink from the Production Spring Striper. As your springs move past the Striper the precise amount of ink is released onto each spring. The system reduces color coding cost, ink won't dry out during short downtimes and no outside power source is required. Changing colors is simple and clean with quick change, disposable ink cartridges. Your operators never come in direct contact with the ink.

The Production Spring Striper system comes complete with marking device, marking fixture and a six-pack of disposable ink cartridges pre-filled with specially formulated striping inks. Standard colors are blue, green, pink, orange and yellow. Custom colors are also available. The inks are automotive approved and OSHA and industry requirements can be met.

Dell Marking Systems also makes inks that are ideal for all marking conditions and surfaces: workplace safe, low VOC, pigmented and non-pigmented inks visible on almost any material including dark surfaces and inks that are resistant to oil, grease, water, acidic or alkaline solutions and elevated temperatures. Special marking inks are available for detection by optical, fluorescent, UV and color sensors.

Dell Marking Systems has provided complete marking system design and build services for over 30 years.

Easy cartridge replacement

"If you can make it – we can mark it."

Send us your part and print for a no obligation evaluation.
